ERPNext Data Archiver

SCOPE

Version 1.1.0

Simple click-through tests

Contents

01 What You Need

02 Test 1 to 5 - Day to Day Checks

03 Test 6 to 7 - Restore and Safety

04 Sign-off

SECTION 01

What You Need

This guide is for people who use ERPNext every day. You do not need to use the command line. Follow each test in order on a staging (practice) site first.

BEFORE YOU BEGIN

- You can log in to ERPNext Desk
- Your user is System Manager or Archive Manager
- Someone has already installed the Data Archiver app on this site
- You have a practice / staging site (do not run the first archive on live production)
- A database backup has been taken, and you know the backup ID and checksum to type in

Day to Day Checks

TEST 1 - OPEN THE APP AND TURN IT ON

Check that Archive Settings exists and can be saved.

1 Log in to ERPNext

You should land on Desk with the usual module icons.

V

2 Search Archive Settings

Use the search box at the top. Open Archive Settings.

V

3 Turn it on

Tick Enabled. Tick Require Backup Reference.

V

4 Enter backup details

Type the Last Backup ID and Last Backup Checksum you were given.

V

5 Pick a closed year

In Archive Through Fiscal Year, choose the last closed year (for example 2025).

V

6 Save

Click Save. Open the page again and check your values are still there.

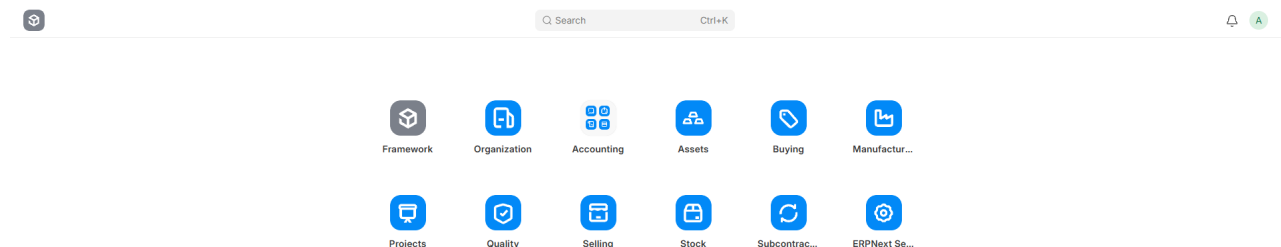

Figure 1 - Desk after login

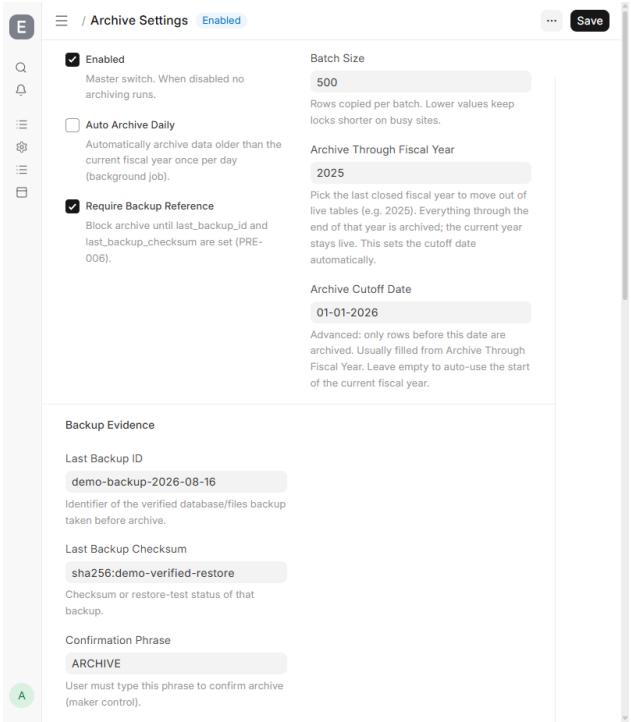

Figure 2 - Archive Settings filled in

Test 1 result

Pass if...	Fail if...
The page opens, Save works, and your values stay after refresh	Archive Settings is missing, or Save shows an error

TEST 2 - PREVIEW BEFORE ARCHIVING

Check that the system can review what would be archived safely.

1 Stay on Archive Settings

Same page as Test 1.

V

2 Open the menu

Click the three-dot Menu (or the Preview Archive button if you see it).

V

3 Choose Preview Archive

A dialog opens with the preview result.

V

4 Read the result

You should see Preflight OK, the year, the cutoff date, and how many rows.

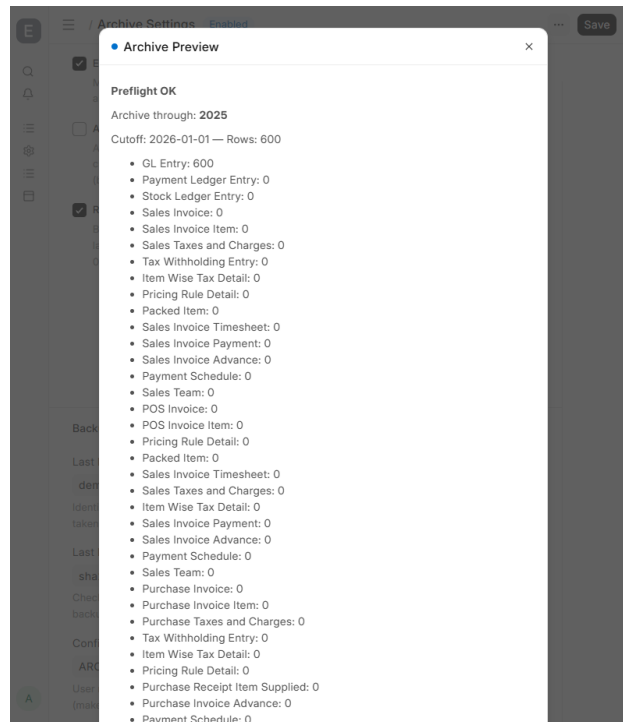

Figure 3 - Preview showing Preflight OK

*Test 2 result***Pass if...**

The dialog says Preflight OK

Fail if...

It says blocked, or asks for backup details you already entered

If Preview is blocked

Common fixes: enter backup ID and checksum (Test 1), finish or cancel unfinished stock/account repost jobs, or clear draft documents dated before the cutoff. Ask your implementer if unsure.

TEST 3 - RUN THE ARCHIVE

Check that archiving finishes successfully.

1 On Archive Settings, start the run

Choose Run Archive Now from the menu.

V

2 Type the confirmation word

Usually ARCHIVE (same as Confirmation Phrase on the form). Submit.

V

3 Open Archive Run

Search Archive Run, or click the run name in the message that appears.

V

4 Wait until it finishes

Status should become Completed (green).

V

5 Glance at Evidence

You should see report text under Evidence (preflight / reconciliation).

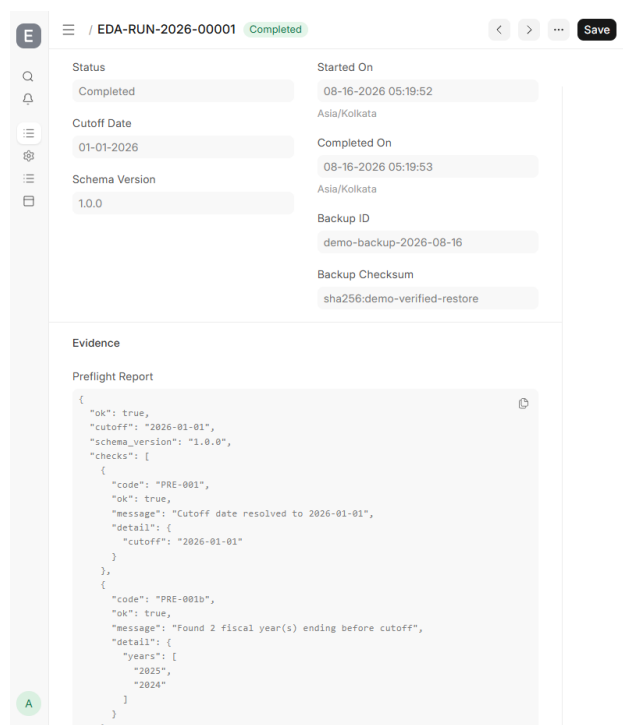

Figure 4 - Archive Run Completed

Test 3 result

Pass if...

Status is Completed

Fail if...

Status is Failed, or it stays stuck for a long time

TEST 4 - CHECK CURRENT-YEAR REPORTS STILL WORK

After archive, normal reports for this year should still open.

1 Open Trial Balance

Go to Accounting, open Trial Balance.

V

2 Choose this year

Pick your company and the current fiscal year. Click to run the report.

V

3 Open Balance Sheet

Same idea: company + current year, then run.

V

4 Ask finance to glance

Numbers should look normal for the current year.

Test 4 result

Pass if...	Fail if...
Both reports open and finish without an error message	A report errors, hangs, or current-year totals look obviously wrong

TEST 5 - BROWSE AN ARCHIVED YEAR (TEMPORARY VIEW)

Retrieve only changes what you see in this login session. It does not move data back.

1 Search Retrieve Archived Data

Open that page from Desk search.

V

2 Look at Archived years

You should see the year you archived, with a row count.

V

3 Tick the year

Select it, then click Apply to this session.

V

4 Check the banner

It should say Archive mode (reading live data plus that year).

V

5 Go back to normal

Click Use live data only. Banner should return to Live mode.

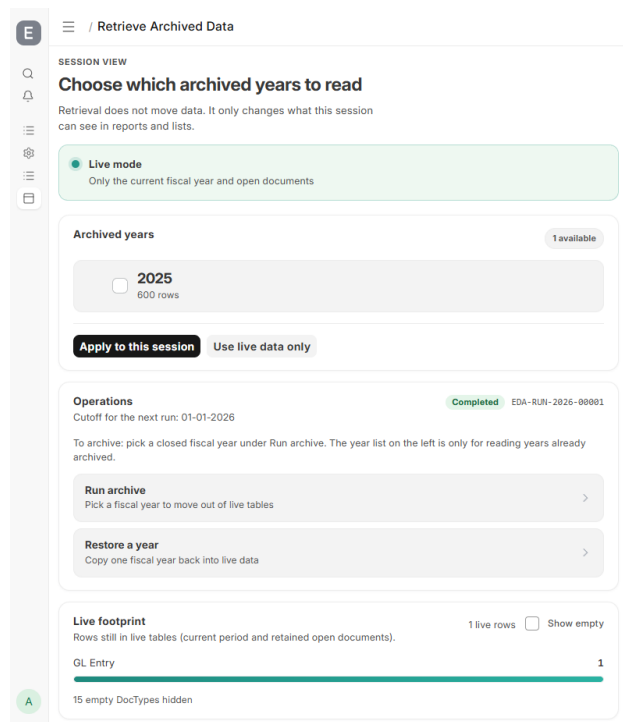

Figure 5 - Retrieve page (Live mode)

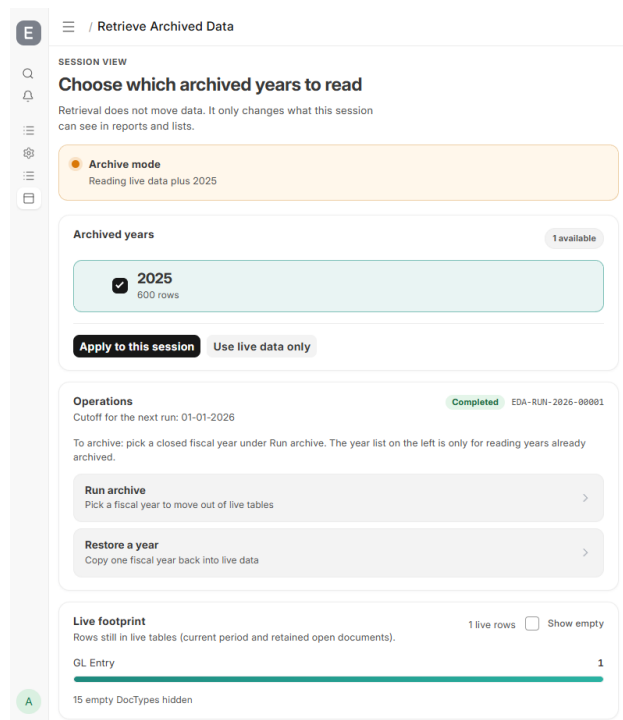

Figure 6 - After Apply (Archive mode)

Test 5 result

Pass if...	Fail if...
Year appears, Apply turns Archive mode on, Live mode returns when you click it	No years listed after a Completed archive, or Apply does nothing

Restore and Safety

TEST 6 - RESTORE A YEAR (MANAGERS ONLY)

Only do this on a practice site unless your implementer says otherwise. Restore puts one archived year back into live data.

1 Open Retrieve Archived Data

Same page as Test 5.

V

2 Choose Restore a year

Follow the prompt to pick an archived year.

V

3 Read the check first

The system lists conflicts if any. Ask your implementer before forcing.

V

4 Confirm restore

If the check is clear, confirm and wait until it finishes.

V

5 Quick check

You should be able to see that year's documents again in normal lists.

Test 6 result

Pass if...	Fail if...
Restore completes and the year is visible again in live data	Restore errors, or you are asked to force without understanding why

TEST 7 - DO NOT START TWO ARCHIVES AT ONCE

The system should stop a second archive while one is already running.

1 Start one archive

Use Run Archive Now (only if there is still something left to archive).

V

2 While it is running

In another browser window, try Run Archive Now again.

V

3 Expect a stop message

The second try should be refused (busy / already running).

V

4 After the first finishes

When status is Completed, starting a new archive is allowed again.

Test 7 result

Pass if...	Fail if...
Second archive is blocked while the first is running	Two archives run at the same time with no warning

SECTION 04

Sign-off

Print this page. For each test, circle Pass or Fail with a pen.

Table - Test results (print and circle)

Test	What you checked	Result (circle one)
1	Archive Settings opens and saves	Pass / Fail
2	Preview shows Preflight OK	Pass / Fail
3	Archive Run ends as Completed	Pass / Fail
4	Trial Balance and Balance Sheet still work	Pass / Fail
5	Retrieve year works; Live mode returns	Pass / Fail
6	Restore works on practice site (if required)	Pass / Fail
7	Second archive is blocked while one runs	Pass / Fail

Before using this on the live company site

Take a verified backup first. Enter the backup ID and checksum in Archive Settings. Only then run archive on production. After it completes, ask finance to check Trial Balance and Balance Sheet for the current year.
