ERPNext Data Archiver

SCOPE

Version 1.1.0

ERPNext v14-v16 | MariaDB

Contents

01 Quick Start

02 Desk and Settings

03 Preview and Run

04 Retrieve Session

05 Checklist and Troubleshooting

SECTION 01

Quick Start

1 Install

bench migrate and bench build --app erpnext_data_archiver

v

2 Configure

Archive Settings: Enable, Backup ID + Checksum, Through Year

v

3 Preview

Preview Archive must be OK

v

4 Run

Run Archive Now - type ARCHIVE

v

5 Confirm

Archive Run status = Completed

v

6 Browse if needed

Retrieve Archived Data is session-only read

Table 1 - Do not confuse Archive and Retrieve

Action	Where	What it does
Archive	Settings or Run archive	Moves data out of live through a chosen year
Retrieve	Year checkboxes	Session view only - does not move data
Restore	Restore a year	Copies one archived year back to live

SECTION 02

Desk and Settings

After login, open Desk and search for Archive Settings, Archive Run, or Retrieve.

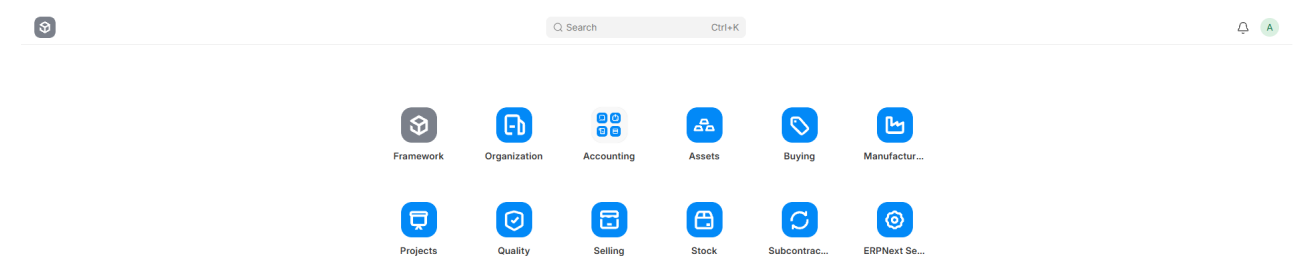

Figure 1 - Desk home

Configure Archive Settings as below, then Save.

Archive Settings Enabled

☒ **Enabled**
Master switch. When disabled no archiving runs.

☐ **Auto Archive Daily**
Automatically archive data older than the current fiscal year once per day (background job).

☒ **Require Backup Reference**
Block archive until last_backup_id and last_backup_checksum are set (PRE-006).

Batch Size
500
Rows copied per batch. Lower values keep locks shorter on busy sites.

Archive Through Fiscal Year
2025
Pick the last closed fiscal year to move out of live tables (e.g. 2025). Everything through the end of that year is archived; the current year stays live. This sets the cutoff date automatically.

Archive Cutoff Date
01-01-2026
Advanced: only rows before this date are archived. Usually filled from Archive Through Fiscal Year. Leave empty to auto-use the start of the current fiscal year.

Backup Evidence

Last Backup ID
demo-backup-2026-08-16
Identifier of the verified database/files backup taken before archive.

Last Backup Checksum
sha256:demo-verified-restore
Checksum or restore-test status of that backup.

Confirmation Phrase
ARCHIVE
User must type this phrase to confirm archive (maker control).

Save

Figure 2 - Archive Settings

Table 2 - Settings fields

Field	Guidance
Enabled	Master switch
Require Backup Reference	Keep on in production
Last Backup ID / Checksum	Verified backup evidence
Confirmation Phrase	Default ARCHIVE
Archive Through Fiscal Year	Preferred way to choose what to archive
Archive Cutoff Date	Auto from year; advanced override

SECTION 03

Preview and Run

Click Preview Archive. You should see Preflight OK and estimated row counts.

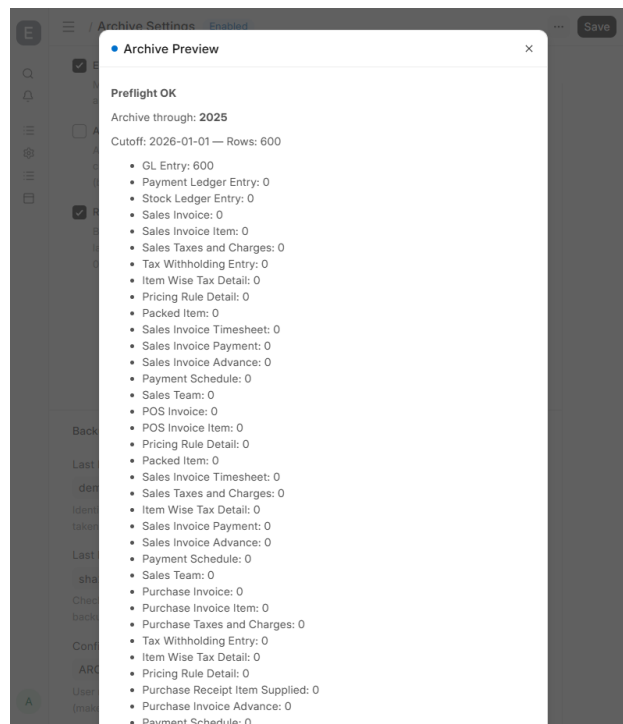

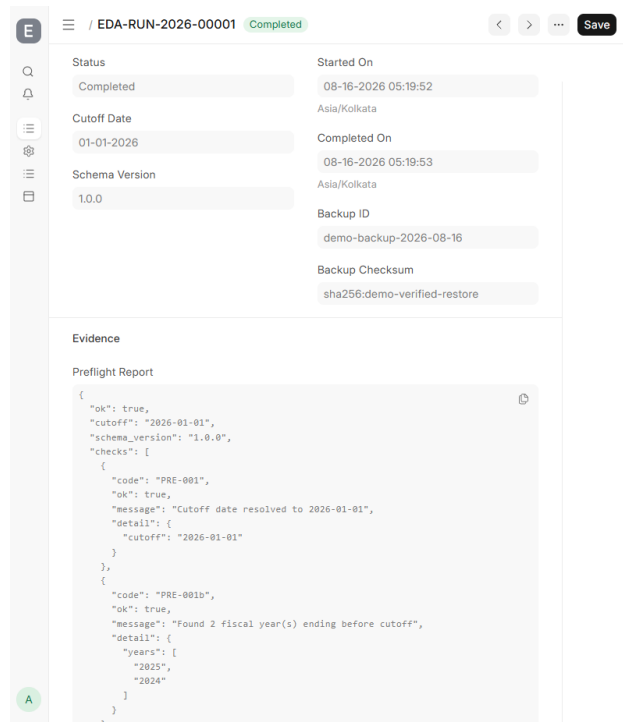

Figure 3 - Archive Preview / Preflight

If blocked: clear PRE-002 drafts, PRE-003 reposts, or set PRE-006 backup fields.

Then Run Archive Now, type the confirmation phrase, and wait for Completed.

*Figure 4 - Completed Archive Run***After a successful run**

Historical rows before the cutoff are in archive tables. Current-year balances stay correct through opening entries. Spot-check Trial Balance and Balance Sheet for the current year.

SECTION 04

Retrieve Session

Open Retrieve Archived Data. The year list is for reading years already archived.

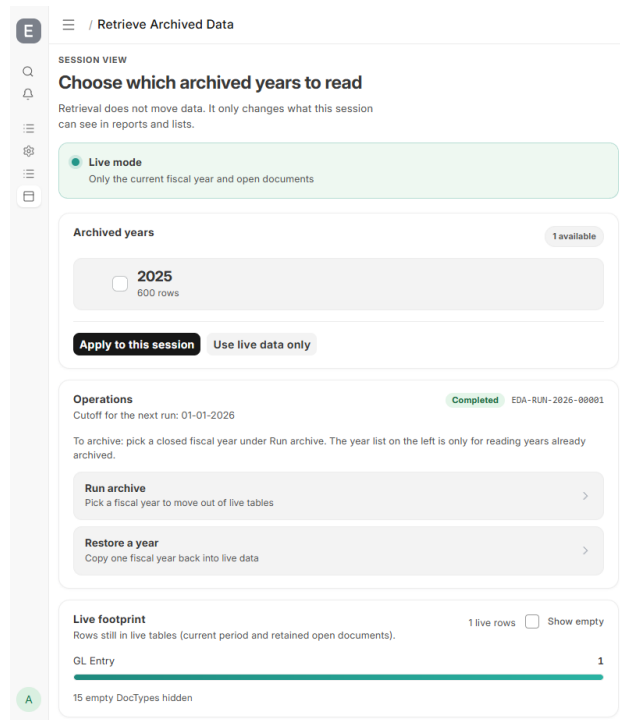

Figure 5 - Retrieve Archived Data

Tick 2025, Apply to this session - banner becomes Archive mode.

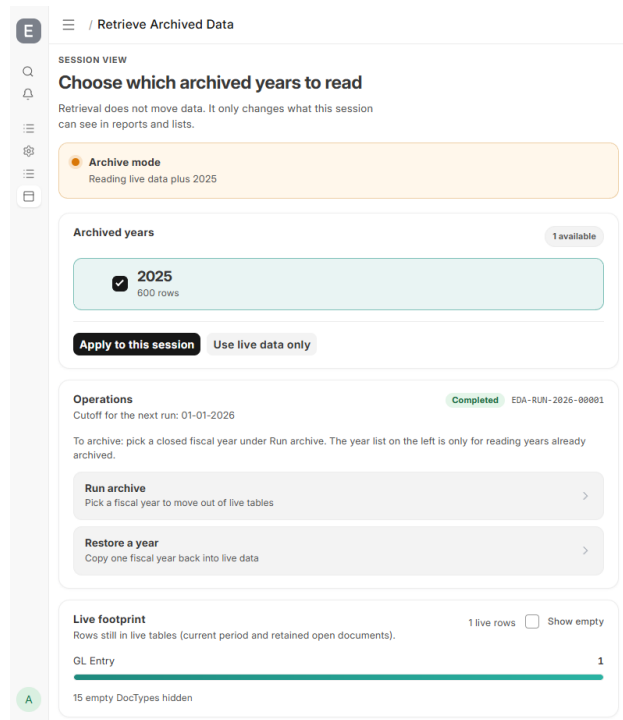

Figure 6 - Session archive mode for a selected year

Click Use live data only to return to the fast hot path.

RESTORE

Managers: Restore a year runs collision dry-run first. Resolve collisions or force only after review. Restore copies archive to live and rebuilds openings.

SECTION 05

Checklist and Troubleshooting

- ☐ DB backup ID + checksum recorded
- ☐ Preview preflight OK
- ☐ Confirmation phrase entered
- ☐ Archive Run = Completed (not Failed)
- ☐ Live historical row counts dropped
- ☐ Synthetic openings present (voucher_type = Archive Opening)
- ☐ Spot-check Trial Balance / Balance Sheet for current FY
- ☐ Retrieve year works; Use live data only restores default

Table 3 - Troubleshooting

Symptom	Fix
Stuck archive / PRE-004	Mark the stuck Archive Run as Failed, then try again
No years on Retrieve page	Complete at least one successful archive first
Cannot uninstall the app	Restore or export archived years first
